

Insuladd – Testimonial

WIPRO IT – Wipro Eco Energy – Campus EC-4 Bangalore, India 2011

Hope all is well with you. I would like to share some very interesting information with you. We have recently done some trials with Wipro, one of the top three IT firms with over 30 campus locations all over India. The results have been excellent and have been tabulated very well by the team at Wipro Eco Energy. Please find attached the readings from the Wipro Campus EC-4 where we had done the trials.

The tabulations clearly show the use of *Insuladd* as a Thermally Insulating Coating. The roof slab gets heated during the day and starts radiating the heat to the underside. By five pm, even though the roof slab begins to cool, the slab is still radiating heat to the underside. However, when you see the readings when using *Insuladd*, the ability of *Insuladd* to reduce the transmission of heat flux reduces the temperature of the underside very effectively. Also you will appreciate that these are readings for just Bangalore. If we look at cities like Delhi, Chennai, Kolkatta, Mysore, etc - the results will be much better. If you review the readings in detail and simulate these into energy savings, you will see that this product has a very short payback period.
